Summary

DevOps and cloud-focused Computer Science & Networking engineering student with hands-on experience across AWS, Azure, and Kubernetes through four engineering roles and two certifications: Certified Kubernetes Administrator (CKA) and AWS Certified Cloud Practitioner. Seeking a DevOps/Cloud Engineering internship.

Certifications

Certified Kubernetes Administrator (CKA)
AWS Certified Cloud Practitioner

The Linux Foundation
Amazon Web Services

Education

INSAT – Institut National des Sciences Appliquées et de Technologie

Engineering Diploma, Computer Science & Networking

Sept 2021 – Present

- Coursework focused on networking, telecommunications, and communication systems within a rigorous engineering curriculum.

Professional Experience

Software Engineering Intern

July 2026 – Aug 2026

PwC France

- Built an LLM routing gateway that selects models per request based on price and benchmark performance, cutting cost while preserving output quality.
- Designed the service to be stateless and horizontally scalable, supporting high-volume traffic without added infrastructure overhead.

Cloud Engineer – Part Time

July 2025 – July 2026

Bemysense – accessibility startup

Doha, Qatar

- Owned AWS infrastructure end to end for an accessibility startup (remote interpreter service, 3D avatar explaining on-screen text), improving performance, security, and scalability of production systems.
- Partnered with the backend team on feature development while owning day-to-day cloud operations.

Cloud Intern

July 2025 – Aug 2025

CarbonJar – B2B SaaS

- Provisioned AWS infrastructure with Terraform for a production B2B SaaS platform, prioritizing scalability, reliability, and automation.

DevOps Intern

June 2024

JoodLab

- Implemented CI/CD pipelines with GitHub Actions to automate build and test stages.
- Automated container deployments with Docker, reducing manual release effort and turnaround time.

Projects

UniFunl – Azure to AKS Migration

Mar 2026 – Present

INSAT Team Project (3 students) for Unifunl, B2B SaaS

- Migrated 7 microservices from Azure Container Apps to AKS with reusable Terraform modules (AKS, PostgreSQL, Redis, ACR), remote state locking in Azure Blob Storage, and Workload Identity for secretless Azure authentication, reducing infrastructure costs by 25%.
- Added a DevSecOps layer: Falco (eBPF, 3 custom rules) for runtime threat detection, and Trivy scans of every image and of the IaC in GitHub Actions, failing the build on unfixed HIGH/CRITICAL CVEs.
- k6 load tests before/after: p95 latency down 64%, 3.7x throughput under stress.

CineVault – Movie Theater Management Platform

Nov 2025 – Jan 2026

Personal Project

- Deployed a NestJS/MySQL API to Kubernetes with a Horizontal Pod Autoscaler; built a GitHub Actions CI pipeline (lint, unit tests, build, k6 smoke tests) to gate every deployment.

Orbit – Kubernetes CTF Platform

Jan 2025 – Apr 2025

IEEE CS INSAT & CCK

- Built and operated a Kubernetes-based Capture The Flag platform for DevOps challenges, run for IEEE CS INSAT chapter events.

Skills & Languages

Cloud & DevOps: AWS, Azure, Kubernetes (AKS, Minikube), Docker, Terraform, CI/CD, GitHub Actions

Monitoring & Security: Prometheus, Grafana, Falco, Trivy, k6, Linux, Git

Development: Express.js, NestJS, Flask, Angular

Languages: Arabic, English, French
